ISS Group awarded contract for Victorian Desalination Project

Perth WA – ISS Group Limited (ASX:ISS) is pleased to announce the awarding of a contract by the Thiess Degrémont Joint Venture for the Victorian Desalination Project.

Utilizing ISS Group's BabelFish product suite, along with a Professional Services Agreement, ISS Group will design and implement the Performance Management and Laboratory Information Management Systems for Victoria's new desalination plant, the value of the contract being in excess of AUD\$1 million dollars.

As part of the design and construction of the Plant Management System, ISS Group will be responsible for the design and implementation of the Performance Management and Laboratory Information Management Systems.

The BabelFish product suite will be used to provide access to online measurement data within the Plant Control System and to monitor water quality parameters against defined performance standards. BabelFish will also provide data to facilitate service payment calculations and critical control point analysis.

ISS Group sees this progressive project as part of its expanding growth into the water utilities market.

"It is very pleasing to commence work with Thiess Degrémont and enter into the water desalination domain. With an increasing number of desalination plants being constructed globally and the world's demand for fresh water, this represents an exciting opportunity for ISS," said Richard Pang, Chief Executive Officer of ISS Group Limited.
